

Using Snyk with Azure Single Sign-on (SSO)

The process of establishing trust between your identity provider and Snyk requires a few separate steps. Read [Introduction to Snyk Single Sign-On](#) for more information.

Snyk details you need to set up in your identity provider

Redirect URIs	<code>https://snyk.auth0.com/login/callback</code>

Azure information to provide to Snyk:

Obtain the following information from your identity provider and organization. You'll provide this information to Snyk in order to establish trust on the service-provider side.

Client ID	Public identifier for the app
Client Secret	Only needed if the IdP does not allow the Implicit grant type
Microsoft Azure AD Domain	The numbers and letters shown in the Directory (tenant) ID, which can be found from the Snyk app you created under Overview
